

Frontline digitisation: conditions for success

Digitally enabled health and care can be transformative for patients, staff and systems. But what is needed to make further and faster progress?

Flexibility,
so integrated care systems can meet the demands and needs of their local population.

Fewer core targets,
with integrated care systems given the autonomy to choose how to deliver them.

Quality training and support,
so health and social care staff understand how to use frontline digital technology and processes.

Align longer-term funding allocations
with the planning guidance process.

More capital
funding for digital infrastructure.
