

Working collaboratively: The South West London Clinical Networks

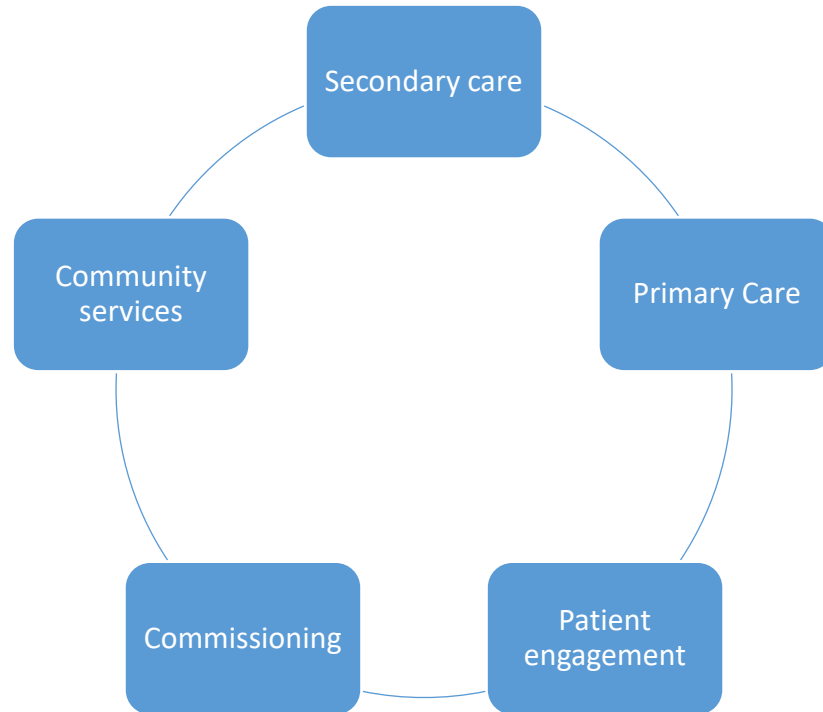

Dr Aditi Shah
SWL Clinical Network Lead

August 2024

South West London

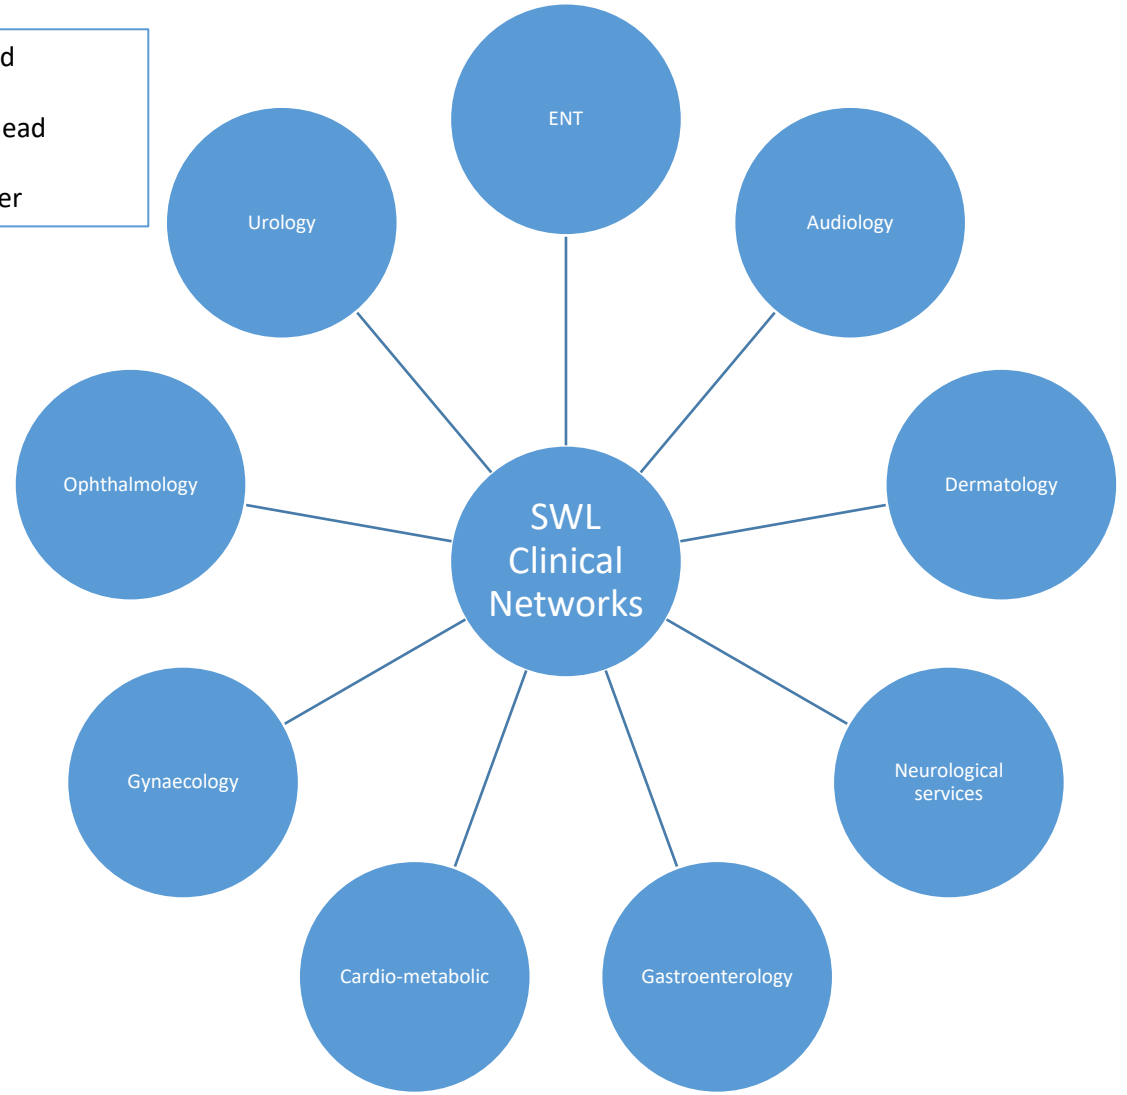

Structure of the clinical networks

- Formed in 2020
- Clinically led and network derived change, improvement and transformation
- Collaboration across the health system
- Finding solutions to shared challenges that cannot be addressed by any one partner or provider alone, but that require a system response to deliver better care to SWL patients across the whole pathway.

Current networks

Primary care lead
Secondary care lead
Network manager

Aims:

- Ensuring clinical best practice in service delivery
- Improving access
- Improving patient outcomes
- Supporting elective recovery
- Delivery against national targets such as GIRFT outpatient guidance
- Improving relationships and interfaces between primary and secondary care
- Delivery of local ambitions including system operational and financial plans, and Trust operational plans
- Reducing health inequalities

Examples of projects

Audiology		Cardiometabolic		Dermatology	
Adult Audiology Pathways	To develop viable proposals for end-to-end hearing care pathways that ensure equity of access and maximise efficiency within existing resource constraints	ECG service review	Review of pathways and services across SWL to identify unwarranted variation in historic Place approaches and develop a clinically appropriate, equitable and accessible service.	Aligned SWL Teledermatology model	Delivery of one of the key recommendations from the Dermatology Service Review, an aligned teledermatology pathway for SWL to improve efficiency and cancer outcomes
		GetUBetter: Heart Health module	Health promotion app with content developed by clinical networks. This module will support patient self-management and expertise in chronic cardiometabolic conditions.	SWL Alopecia High-Cost Drug Pathway	To develop and implement a standardised HCD pathway to promote equity of access and reduce unwarranted variation and optimise costs.
ENT		Gastroenterology		Gynaecology	
Primary care Referral Guidelines	Standardised SWL pathways and referral guidelines to support primary and secondary care in referral optimisation	Pre-referral Guidance Standardisation	Standardised SWL-wide pre-referral guidelines, to optimise pre-referral diagnostics, enable one-stops, and better manage high referral volumes.	Service review & Women's Health Hubs	Recommendations to progress from whole-system review, including how non-admitted care is delivered through the formation of Women's Health Hubs.
Straight to Test for Hearing Loss	SWL Hearing Health Pilot in Community Pharmacy Advanced triage and straight-to-test pathways for unilateral hearing loss and tinnitus	Urgent Benign Conditions referrals	To develop routes to urgent secondary care access for conditions such as newly-diagnosed IBD or coeliac through repurposed outpatient clinic capacity.	GetUBetter: Pelvic health and peri-natal	Health promotion app with content developed by clinical networks. This module will support patient self-management in urogynaee and quickly identify women requiring specialist input.
Neurological Services		Ophthalmology		Urology	
SWL Dizziness Pathway	Development of a SWL clinical pathway to support GPs to identify causes of dizziness and ensure patients are treated or referred appropriately. With ENT and Cardiometabolic CNs.	Community ophthalmology services	The network is reviewing Minor Eyecare Services (MECS) and Covid Urgent Eyecare Services (CUES) to develop a clinically appropriate, equitable and accessible future service.	Direct Access to CT KUB	NHSE London region released this pathway in 2024. The network will implement this pathway in primary care in SWL.
Community physiotherapy spasticity	Implementation of an innovative new physiotherapy-led community specialist spasticity service using new 'consultant physiotherapist' roles. Grant funded.	Post-op cataract	Exploration of opportunities to transform post-op cataract services to reduce follow-up demand, release clinician time and release costs through automated review via AI.	Community education	Health promotion outreach in areas of deprivation, delivering health education within at-risk communities.
